### Welcome

The Community on Agricultural Policy Implementation and Geo Information (CAPIGI) brings together governments, industry and research to discuss the impact of geo information in implementing agricultural policy. CAPIGI is about the state-of-the-art innovations and research in geo information sciences. These emerging technologies get illustrated with practice experiences in agriculture, at farm level and in agricultural policy implementation.

CAPIGI is a network for geo-information experts active in agriculture. See programme for our upcoming events.
